Key Insights

The Meredith College Poll conducted a mixed mode sample of North Carolinians (220 live caller respondents and 505 email respondents) to registered North Carolina voters from October 21-25, 2018. The survey's margin of error is +/-4%.

Satisfaction with the direction of the country and state

With just a few days until Election Day, a majority (53.6%) of North Carolinians are dissatisfied with how things are going in the country and just under half of the state's voters (45.1%) are dissatisfied with how things are going in the state. This level of dissatisfaction often produces a "change election" in which voters reject the party in power and replace elected officials with those of the other party.

The partisan divide in people's perceptions about their satisfaction with the nation and state are stark. Almost two-thirds (65.2%) of Republicans are satisfied with the direction of the country, reflecting their party's control of the White House and Congress. As the same time, almost three quarters (73.4%) of Democrats and nearly sixty percent (58.3%) of unaffiliated voters say they are dissatisfied with the direction of the country.

Men (48.5%) and high wage earners (50.5%) are among those most satisfied with the direction of the country, while women (60.2%), those who live in urban areas (60.6%), and lower wage earners (58%) are dissatisfied. Surprisingly, racial and ethnic voters do not express the highest dissatisfaction levels, despite the charged political climate minorities often feel persecuted by the majority.

The satisfaction-dissatisfaction gaps discussed above also apply to the question about the direction of North Carolina, but the gaps are not as large. A majority of Republicans (53.7%) are satisfied with things in the state, whereas a slight majority of Democrats (51.3%) are dissatisfied. Likewise, the gaps between males and females, whites and minorities, and rural and urban dwellers exist, but the differences are not as pronounced as those in the question about the direction of the country.

These satisfaction-dissatisfaction results are consistent with the Meredith Poll results from March and August of 2018, suggesting that people's views about the direction of the country and state are "baked in" because of the political climate, rather than other factors such as the economy or other situations.

Status of Women in the United States

This year has been referred to as the "Year of the Women" with a historically high number of women running for Congress and pundits discussing the role of women voters as potentially shaping the results of the midterm elections. As we have done in 2015 and

2016, we decided to ask North Carolinians about their perceptions of women as political leaders and why women continue to be underrepresented in political offices.

In terms of who has it better—men or women—in the United States, a majority of voters (56.4%) stated that men are still treated more favorably, while only 14.4 percent thought that women had it better. A large majority of Democratic (71.5%) and unaffiliated (60.8%) voters thought that men have it better in the United States, while a plurality of Republicans (43.9%) indicated that they did not know which group had it better. Women were much more likely than men to say that men had it better in the country (63.2% v. 46.3%) and, somewhat surprisingly, younger voters—Millennials—were the most likely to say that men had it better than women (62.7% for Millennials v. 34.9% for the Silent Generation).

Women in Political Offices

In terms of people's perceptions of the political leadership abilities of men and women, over two-thirds of voters (66.8%) think that men and women are equally good as political leaders. This level of support for men and women being equal in terms of political leadership is similar to the responses of those surveyed in 2015 and 2016. More Republicans (27.4%) thought that men made better political leaders than women and about one-in-five Democrats (20.5%) thought women were better leaders than men. These differences likely reflected the gendered nature of political parties with more men identifying as Republicans and more women as Democrats. As you might expect, more men saw men as better political leaders than women and more women saw women as better political leaders than men.

A great majority (86.9%) of North Carolinians believe that having more women in elected offices is important. All demographic groups had strong levels of support for the idea that women in office is important, but there were differences between Democrats (95.3%), unaffiliated voters (89.8%), and Republicans (75.7%). Other factors such as race, income levels, and age group did not affect the people's perceptions about the importance of having women in elected office.

We asked people about common reasons given for the underrepresentation of women in political offices. Some reasons, such as the idea that women are inferior to men in leadership or that women are not tough enough were not identified as reasons why there are relatively few women in office. Again, these are consistent with our findings from early surveys.

Other reasons, however, were identified as significant in terms of affecting the number of women in office. Almost half of the respondents (44.8%) stated that many Americans weren't ready to elect women to higher office, including almost two-thirds (63.6%) of all Democrats, almost half the women (47.1%), and, surprisingly, almost half of Millennials (47.1%).

A large percentage of respondents (67.9%) indicated that women are generally discriminated against in this country and that politics is no different than other areas of life. Democrats (62.9%), females (51.7%), and Millennials (51.5%) think that discrimination generally affects the ability of women to have success in achieving parity in political offices. Many fewer Republicans (25.7%) and older voters (28.6%) identify gender discrimination as a major factor in reducing the number of women serving in office.

Gender Balance Laws

In terms of potential solutions, most North Carolinians do not favor legislation which mandates gender parity or that which requires political parties to nominate equal numbers of men and women for appointed or elected offices. A plurality of voters (46.4%) stated that no gender balance legislation was needed for any level of office. Democrats, however, were much more supportive of legislative solutions to the gender imbalance in appointed or elected offices, while Republicans were very strongly against such actions.

Net Neutrality and Redistricting

In this survey, we were interested in two policy issues—net neutrality and redistricting. The net neutrality issue is important because of the actions taken by President Trump’s appointees to the Federal Communication Commission seeking to remove net neutrality protections for equal access to web content and because states, such as California, have taken action against the desires of the Trump administration to remove consumer protections on web access and content.

A majority of North Carolinians (54.3%) stated that they know what net neutrality is, while almost 40 percent (37.2%) do not. Not surprisingly, younger citizens like Millennials (63.7%) and Generation X (60.7%) stated that they knew about net neutrality, while older citizens like Baby Boomers (41.2%) and those in the Silent Generation (18.6%) were less familiar.

In terms of support for net neutrality, the results correlated with the results on knowledge. Just over two-thirds of respondents indicated that they supported net neutrality. Younger respondents were much more supportive of net neutrality than older voters, who generally had a higher number of “don’t know” responses. There were differences between Democrats (77%), unaffiliated voters (69.4%), and Republicans (53%) in terms of support for net neutrality.

The issue of gerrymandering or partisan redistricting is a very hot topic as we get close to Election Day. Control over Congress and the General Assembly, in part, depends on the current system of redistricting, which allows for the party that controls the legislature after the decennial Census to draw the maps. For over thirty years in North Carolina, there have

been calls to change the redistricting system from one controlled by political parties to one in which a nonpartisan, independent group would draw political districts. A majority of our respondents (58.5%) indicated a desire to replace the current system with one in which an appointed commission of nonpartisan officials would draw the maps. Almost one-quarter of respondents (22%) indicated that they did not know which system was best, indicated that, for many citizens, there needs to be more education around the subject of redistricting. The idea of having a nonpartisan, independent commission draw districts had broad support as Democrats (56.5%) and Republicans (51.7%) supporting the idea. Unaffiliated voters had even stronger support (69.7), presumably since they have less of a vested interest in redistricting.

Voting and the 2018 Midterm Elections

Voters in North Carolina continue to exhibit a high degree of enthusiasm for voting in the midterm elections. A large majority indicated that they were almost certain (71.1%) or probably going to vote (13.1%). These results are similar to those in August and about five percentage points higher than in March. Although it is highly unlikely that over 80 percent of North Carolinians will vote in the 2018 elections (the historical average over the last 20 years is approximately 43%), the relative enthusiasm of the voters in 2018 would suggest that turnout will be higher than average.

In terms of partisan enthusiasm, Democrats retain their small advantage from the spring and late summer as 90 percent of this group indicate that it is almost certain or very likely that they vote, as compared to Republicans (84.5%) and unaffiliated voters (85.4%). Among other groups, whites indicate a higher degree of enthusiasm than black voters and a decidedly higher level of enthusiasm than other groups, such as Asians or Hispanics. Women and men appear equally enthused to vote.

In terms of support for candidates of particular parties, Democrats have extended their advantage on the generic ballot questions for congressional and legislative seats. Early Meredith Poll results indicated that Democrats held about a six-point advantage over Republican candidates in congressional races (August), but now the advantage is over ten points (48.8%-38%). There are many possible explanations for this movement toward Democratic candidates in recent months, including fallout over the Kavanaugh Supreme Court hearing and a reaction to President Trump (see approval ratings below).

The Democratic advantage on the generic ballot for legislative candidates has increased slightly since the August poll with Democratic candidates holding just over a ten-point advantage (48.3%-37.5%). This represents a one-point increase since August.

The generic ballot gaps between support for Democratic candidates for congressional and legislative seats is due to the growing gender gap. Men are almost evenly split for candidates of both parties, but there is a 15-point gender gap in terms of women favoring Democratic candidates.

Approval Ratings of Political Figures and Institutions

The favorability ratings of key political figures and institutions mirrors the results of the generic ballot questions. President Donald Trump is less popular in North Carolina than he was in August with a current approval rating of 38.7 percent and a disapproval rating of 51.2 percent. This represents a loss of over five points in his approval since August, when he peaked in his Meredith Poll approval ratings at just over 44 percent. This loss and the fact that he is so far under water suggests that he may be a drag on key Congressional races in NC-2, NC-9, and NC-13.

On the other hand, Roy Cooper’s approval rating has risen to 55.3 percent, after having been 48 percent in August. His disapproval rating of 22.6 percent means that he has positive net approval of 22.7 points. Cooper rates well among all groups, including Republican voters (42.6% approval).

The approval for Republicans in Congress (40%) and the General Assembly (36.8%), as well as Democrats in Congress (42.4%) and the General Assembly (45.4%) are relatively unchanged since the August poll.

As you may know, our country has 12 women governors out of 50 and 23 US Senators out of 100. There are many reasons why there are fewer women than men in high political office. I am going to read you a list of some of them. For each one, please tell me whether you think it is a major reason, a minor reason, or not a reason why there are fewer women in political office.

Reasons why there are fewer women in office

Many Americans aren't ready to elect women to higher offices.

Gender Quota Laws

About half the countries in the world have gender quotas, which are designed to ensure that their legislatures are gender balanced. Some countries require that a certain number of elected officials are women, while other countries only require that parties nominate an equal number of men and women. Which comes closest to your view?

	The US government should require a certain number of elected women.	The parties should be required to nominate a certain number of men and women.	There should be no gender balance requirements.	Don't know	No answer/ Refused

Right now, North Carolina political districts—like those used for Congressional seats or General Assembly seats—are drawn by the political party that controls the General Assembly. Some people think that these districts should be drawn by a nonpartisan, independent commission. Which comes closer to your view?

	The political party that controls the General Assembly should draw the districts.	A nonpartisan, independent commission should draw the districts.	Don't know	No answer/ Refused

WOMEN AND THE 2018 MIDTERM ELECTIONS

	Strongly approve	Somewhat approve	Somewhat disapprove	Strongly disapprove	Never heard of	Don't know	No answer/Refused
Boomer	16.9	31.0	12.0	19.0	2.7	14.1	4.4
Silent +	9.0	24.0	12.0	25.0	1.0	26.0	3.0
Less than \$40,000	22.2	27.8	12.8	9.0	9.0	13.3	6.0
\$40-99,999	17.2	27.0	19.5	18.7	6.8	6.4	4.4
\$100,000 or more	11.1	36.1	16.7	19.4	8.3	3.2	5.1
Rural	19.5	27.7	16.4	17.4	4.1	11.6	3.4
Urban	13.6	29.9	19.6	15.7	12.1	2.7	6.5

Poll Methodology

Mode:	Live Interviewer Telephone Interview from randomized sample (Dual Frame: Cell Phone and Landlines) Email Surveys (SSI Panels)
Population & Sample Area	North Carolina registered voters (Board of Elections lists)
Dates in the field:	October 21-25, 2018
Registered Voter Sample Size	725
Registered Voter Margin of Error	±4%
Confidence Level	95%

Procedures Used for Conducting the Poll

The Meredith College Poll uses a sample of North Carolina registered voters with telephones and wireless (cell) telephone numbers. We also included randomly selected North Carolina voters to contact by email. Please direct questions about the Meredith College Poll's methodology to David McLennan (919-760-2287 or dbmclennan@meredith.edu).

The Meredith College Poll uses CATI system software (Computer Assisted Telephone Interviewing) for the administration of telephone surveys. We attempt to reach each working telephone number in the sample up to five times. We only interview residents of North Carolina

who are over 18. The Meredith College Poll conducted the survey in English with students who are fluent in Spanish. Live interviewers called from 5 p.m. to 9 p.m. Sunday-Thursday.

We use Qualtrics for the administration of email surveys.

Additional Methodological Decisions

“Don’t Know” and “Refused” Options

All questions include an option for respondents to volunteer “don’t know” or to refuse. In most questions, callers do not prompt these possible responses.

Completion Criteria

An interview is a “complete only” if a respondent progresses through the entire survey. Respondents who hang up before completing the last question or refuse to answer more than 10 percent of the questions are incompletes. Email surveys are only counted with less than 10 percent of the questions are incomplete.

Sampling

Survey Sampling International, LLC, provide samples of telephone numbers. To equalize the probability of telephone selection, sample telephone numbers are systematically stratified according to subpopulation strata (e.g., a zip code, a county, etc.), which yields a sample from telephone exchanges in proportion to each exchange’s share of telephone households in the population of interest. Estimates of telephone households in the population of interest are generally obtained from several databases. Samples of household telephone numbers are distributed across all eligible blocks of numbers in proportion to the density of listed households assigned in the population of interest according to a specified subpopulation stratum. Upon determining the projected (or preferred) sample size, a sampling interval is calculated by summing the number of listed residential numbers in each eligible block within the population of interest and dividing that sum by the number of sampling points assigned to the population. From a random start between zero and the sampling interval, blocks are selected systematically in proportion to the density of listed household “working blocks.” We use SSI because they produce valid samples for many polling organizations, including the Meredith College Poll.

For the email survey, we used a panel sample of internet users from North Carolina that are part of SSI’s over 11.5 million worldwide panelists that are screened and verified by the company. They administer the survey by sending requests to their North Carolina panelists, who opt-in or volunteer for the survey. We ask an additional screening question about whether panelists are registered voters in North Carolina. If they answer “no,” their responses are not used. Although using a sample such as this makes it difficult to compute or report a margin of sampling error, we examine the demographic characteristics of those completing the internet surveys to compare our sample to the North Carolina population. (Also see the American Association for Public Opinion Research’s (AAPOR) [Non-Probability Sampling Task Force Report](#) and the AAPOR report on [Opt-In Surveys and Margin of Error.](#))

Because we used dual mode (telephone and internet) surveying, we compared the results from both sets of respondents. The average age of the internet respondents was 41, while the average age of the telephone respondents was 53. Otherwise, the differences in gender, party affiliation, and other factors was negligible.

As with many surveys, we weight our sample to closely approximate what we believe the NC electorate will be in Election Day. For this survey, we weighted gender and geographic location.

Sampling errors and statistical tests of significance take into account the effect of weighting at each of these stages. The margin of sampling error at the 95% confidence level is plus or minus 4.0 percentage points for results based on the full sample (n=725). If the internet respondents are excluded, the margin of sampling error is 3 percentage points. In addition to sampling error, one should bear in mind that question wording and practical difficulties in conducting surveys can introduce error or bias into the findings of opinion polls.
